

- **Topic:** This webpage will guide the user through various basic techniques and/or exercises in Adobe Illustrator and Photoshop. The audience is listed in the "Audience" bullet point.
- **Audience:** My webpage is designed for anyone to view, including possible employers, students, and family members. The purpose is to show how to perform the task given in the "Topic" bullet point.
- **Colors:** Since I do not know for sure what colors I will use, I will use any combinations of two colors from these colors – **Dark blue**, **white**, **black**, **blue**, **gray**, and **light blue** (I suspect the two chosen colors will be the background colors of the webpage)
 - **Text color:** Will be one of the four leftover colors remaining from the color list above (I'll make certain that the chosen color will still allow the text to show through clearly)
- **Text:** Typeface – **Verdana** & font family – **Bold**
- **Bitmap and Vector Images:** I do not know for sure which ones I will use for bitmap graphic or vector images but I think I will when I actually work on the final project
 - The digital images from my ART 260 (Graphic Design) course, including the final products and the images used to create the final products
 - Photos of myself and my pet dog, separately, including my professional look on my LinkedIn account
 - If I feel like I need to, I may use images from the internet
- **Sound:** I do not exactly know what sound I should use but I think it should have a nice, soothing, calm quality to it and should help the viewer enjoy the video more. The song may also change based on the technique or exercise to be showcased. This song might be a good example of a calm, soothing sound: <https://soundcloud.com/nocopyrightsounds/alan-walker-fade-ncs-release?in=d-quade/sets/international-gloving-league>
- **Animation:** The animation will showcase an example of the technique or exercise used in Adobe Illustrator and/or Photoshop. It should also show where the technique and exercise is located on the webpage.
- **Skeuomorphism:** icons I could invent might be located at the top of my webpage. They may have a simple image about what certain techniques or exercises the user wants to learn.
 - For example, let's say at the top of my webpage, I have links such as, "High Contrast", "Creating a Zombie", etc.
 - An icon for "High Contrast" might be just a simple image of a high contrast image I made in Adobe PhotoShop
 - For "Creating a Zombie", the icon might look like a zombie I digitally created in Adobe Photoshop
 - The above are examples of what the icons might look like based on the techniques and exercises on my webpage
- **Viewing:** The user/viewer will need to see some sort of text or image related to whatever techniques or exercises they are about to view
 - If the page is loading, they may see some sort of image, such as a photo of myself, or text saying the page is loading.
 - If they're seeing something else, it should display an error which may tell the user to reload the page or something to continue viewing my webpage.
